

If you could predict as accurately as Idris®  
you'd know the outcome!

**Idris®** We can offer your Road Users a safer driving environment

**Idris® Incident Detection System:**

- Detects vehicles accurately.
- Operates in slow moving, stop-start traffic as well as free flow.
- Detects vehicles travelling in the wrong direction.
- Detects a single stopped vehicle within the detection zone.
- Distinguishes between straddling & 2 vehicles side by side.
- Differentiates between signal overspill from a large vehicle & a genuine small vehicle alongside.
- Correctly classifies tailgating and towing vehicles.

Road Users face potential hazards all the time. Where space is limited, a partial or total road block poses an extra danger especially in tunnels, deep walled cuttings or where sight lines on expressways are restricted. Frequently no shoulder or walkway is provided but even when space permits these safety measures are severely limited. This generates further problems for the Police and Emergency Services. The Idris Detection System can help prevent an incident turning into an accident.

The Idris Technology is protected by one or more of the following patents: EP0879457, USA 6345228 and 6337640. Patent applications pending in other countries. Idris® is a registered trademark of Diamond Consulting Services Ltd.
